Pacific Ocean tuna - longline (Liancheng)

Overview

FIP Description
The fishery being assessed is comprised of pelagic longline vessels that target albacore tuna with incidental catch of bigeye and yellowfin tunas, fishing on the high seas of the Pacific Ocean. The agent vessels are managed by the Liancheng Overseas Fishery (Shenzhen) Company, and are flagged to China, Taiwan, the Federated States of Micronesia and Fiji. From time to time and where permitted, the vessels may fish in national EEZs including Cook Islands, FSM, Fiji, and Vanuatu. It is assumed in this pre-assessment that management within these EEZs is at least equal to the high seas.

FIP Objective(s)

- Achieve sustainable stock status for albacore, bigeye and yellowfin that is consistent with the Maximum Sustainable Yield (MSY) and management systems strengthened to achieve this.
- To improve the availability of accurate data on catches, retained and especially bycatch by strengthening information systems and training.
- To collaborate with other institutions working on tuna fisheries issues in the country, including working together to improve the management and policy towards sustainable fisheries for example Harvest Control Rules.
- Strengthen ETP and retained species management strategies.
- To promote traceability to ensure that the origins and status of Tuna products purchased are well-known and all coming from legal fisheries by engaging the supply chains that support improvement through the implementation of e-monitoring.
- Improve governance and decision making process.
- To achieve MSC Certification and the above objectives by 2024.
