

INACTIVE Southern Brazil monkfish - gillnet

Overview

FIP Description

Note: This FIP is inactive.

The principal private sector stakeholders of the FIP are organized in a formal consortium: Manoel Cordeiro (fishery operator), Fish Life (local processing and export), Blueyou Consulting (technical guidance on fishery improvement) and Blueyou Trading (European commercial partner). Together with the leading fishery scientists in Santa Catarina, São Paulo and Rio de Janeiro, a proposal has been developed to conduct stock assessments and analyse catch based on a catch documentation scheme (CDS) of the gillnet fleet and samples from the trawl fleet, which can then serve as basis for fisheries management.

The monkfish stock was likely overfished in the early 2000s. The gillnet fleet has shrunk since then to only two vessels and the stock might have recovered, but trawlers continue to catch monkfish as bycatch and there is no updated stock assessment available. Providing updated stock assessments and evaluating bycatch species to derive catch limits are therefore the immediate improvement needs. In the intermediate term, the program aims to better control and monitor the activity of the trawl fleet, which severely impacts the monkfish stock.

How is this FIP Doing?

Current Status:

Actions Progress This shows the proportion of actions in the workplan that the FIP has completed.

Actions Overview This shows the proportion of actions that are behind schedule, on track, completed, or not yet started.

Behind	On Track	Complete	Future
100%	0%	0%	0%

Red Indicator Progress This shows the proportion of actions specifically addressing red indicators that are behind schedule, on track, completed, or not yet started. This helps users understand the progress the FIP is making on the biggest challenges in the fishery.

Behind	On Track	Complete	Future
100%	0%	0%	0%

FIP Objective(s)

The critical gap impeding sustainable fisheries management in the Southern Brazil monkfish fishery is that the absence of data on current stock biomass and lack of catch accounting hampers the ability of fisheries authorities to establish appropriate catch limits and identify adaptive management interventions. Therefore, the key objectives for this FIP include:

- Implement a catch documentation scheme for the gillnet fleet targeting monkfish
- Data collection program, representative sampling of the trawl fleet
- Conduct stock assessments, derive MSY-based reference points by cohort analysis
- Determine and implement TACs (gillnet AND trawl fleet)
- Observer program for catch composition (gillnet and trawl fleet)
- Motivate reform for regulation of the trawl fleet (5% rule)
- Development of markets - all efforts will be financed over the supply chain
- MSC certification (after 5 years)

FIP Type

Comprehensive

FIP Stage

Stage 3: FIP Implementation

Start and Projected End Dates

July, 2016 -
July, 2021

Species

Common Name

Monkfish

Scientific Name

Lophius gastrophysus

Gear Type

[Gillnet](#)

Location

FAO Major Fishing Area

[Area 41 \(Atlantic, Southwest\)](#)

Exclusive Economic Zones

Country

Brazil

Country Flag of Vessel

Brazil

Regional Fisheries Management Organization (RFMO)

High Seas Name

Atlantic Ocean

Estimated Total FIP Landings

300 metric tons
