

Taiwan Hsin-Kang mahi-mahi - longline

Overview

FIP Description

In the last decade, the mahi-mahi annual catch has been around 11,000 metric tons in Taiwan. During the fishing season, one fishing vessel can catch more than one thousand kilograms of mahi-mahi a day. For local fishermen, mahi-mahi is a very important economic resource that ensures their livelihood. In order to conserve this important fish resource, the Hsin-Kang Fishermen Association, which is made up of stakeholders such as service wholesalers, processing plants, fish traders, and local fishermen have jointly initiated the Hsin-Kang mahi-mahi FIP. Since the FIP has commenced, three additional associations - the Su-Ao Fishermen Association and the Tung-Kang Fishermen Association, all of which also have mahi-mahi fisheries - have joined the Hsin-Kang mahi-mahi FIP. They have agreed to comply with the Hsin-Kang mahi-mahi FIP's requirements.

How is this FIP Doing?

Current Status:

% of Indicators Tracked Basic FIPs may focus their workplans on a subset of the indicators. This shows the proportion of total indicators the FIP is working on.

Actions Progress This shows the proportion of actions in the workplan that the FIP has completed.

Actions Overview This shows the proportion of actions that are behind schedule, on track, completed, or not yet started.
