

Canada redfish (Unit 1 & 2) - trawl

Overview

FIP Description

Fishery Improvement Projects provide an opportunity to improve and document information and management of fisheries not yet eligible to receive sustainability certifications.

The Groundfish Enterprise Allocation Council (GEAC) is an organization that represents the >100? groundfish license holders in Atlantic Canada. The membership of GEAC holds almost 80% of the quotas for each of the two management units. As the fishery recovers from historic lows, the importance of a sustainable economic development of this expanding resource has never been higher. This FIP is a forum to plan for any sustainability issues to be resolved prior to assessment against the performance indicators of the MSC assessment framework.

How is this FIP Doing?

Current Status:

Actions Progress This shows the proportion of actions in the workplan that the FIP has completed.

Actions Overview This shows the proportion of actions that are behind schedule, on track, completed, or not yet started.

Behind	On Track	Complete	Future
0%	56%	44%	0%

FIP Progress Rating

FIP Objective(s)

The overall objective for this FIP is successful MSC certification of the fishery - individual FIP objectives expected to be achieved by December 2020 are:

- Confirm on-going changes to stock status.
- Develop stock projection capability for both species in both units, confirm stock rebuilding timeframes.
- Develop/ implement a formal harvest strategy for stocks and species.
- Develop harvest control rules that are robust to main uncertainties.
- Implement commercial sampling program to collect and identify species mix in catch.
- Update existing or select new assessment model which considers main uncertainties and is capable of evaluating harvest strategy and harvest control rule options.
- Produce a fishery footprint relative to both sensitive and less sensitive benthic habitat.
- Develop an integrated fishery management plan (IFMP) for the Unit 1 and 2 redfish fisheries, addressing all elements for which PIs exist.
- Develop fishery-specific objectives and incorporate them into IFMP.

FIP Type

Comprehensive

FIP Stage

Stage 4: Improvements in Fishing Practices or Fishery Management

Start and Projected End Dates

April, 2018 -
December, 2023

Species

Common Name

Acadian Redfish

Scientific Name

Sebastes fasciatus
