Shantou-Taiwan Chinese common squid - jigging/single trawl

Overview

**FIP Description**
This FIP was initiated by Beaver Street Fisheries and Shantou Haimao Foods Co.Ltd. in late 2013 and facilitated by Sustainable Fisheries Partnership (SFP). After a year and a half, the FIP successfully engaged various stakeholders with coordination from China Blue Sustainability Institute (shortened as ?China Blue?), including national institutes (i.e. China Society of Fisheries, South China Sea Fisheries Research Institute, Chinese Academy of Fisheries Science (SCSFI)); local fishery authorities (i.e. Shantou Ocean and Fishery Bureau (SOFB)); local industry association (i.e. Shantou Fisheries Industry Association (SFIA)); and leading international squid buyers and main processors in China.

**Basic Information:**
1- Target Stock: the common Chinese squid *(Uroteuthis chinensis)* fishery within the eastern Guangdong (Shantou) - Taiwan Bank Fishing Ground (21°50'- 23°30'N, 116°00'-119°30'E)

2- Fishing gear: jigging and single trawling

3- Fleet involved: around 1000 small to medium scale fishing vessels harbored in Nan’ao Island, Shantou, Guangdong

How is this FIP Doing?

**Current Status:**

| % of Indicators Tracked | 82% | 18% |

% of Indicators Tracked Basic FIPs may focus their workplans on a subset of the indicators. This shows the proportion of total indicators the FIP is working on.
**Actions Progress** This shows the proportion of actions in the workplan that the FIP has completed.

![Progress Table]

**Actions Overview** This shows the proportion of actions that are behind schedule, on track, completed, or not yet started.

**FIP Progress Rating**

C - Some Recent Progress

---

**FIP Objective(s)**

The project aims to revive the squid fishery and to enhance capacity of the industry and local fishery managers to sustain the fishery against the MSC standard. Through implementing the FIP, multi-stakeholders of the fishery supply chain are expected to jointly improve management efficiency and practices, which will demonstrate a new model of fishery resource management that inspires more initiatives for sustainable coastal fishery in China. As an output of this project, a most suitable fishery unit defined by species, fishing area, fishing fleet and operation gear type will be recommended to obtain MSC fishery certificate when it is qualified to meet with the standards.

**Specific Objectives by December 2019:**

1- To establish a fishery information collection system with a joint effort from government, research institute, industry, fisher, and NGO

2- To identify the minimum catch size of *Uroteuthis chinensis* and to implement such voluntary protocol among participants of fisher and processing plants

3- To pilot in building a fishery resource management committee that encourages local fisher to manage fishery resource with the help from government, research institute and NGO

**FIP Type**

Basic
### FIP Stage
Stage 3: FIP Implementation

### Start and Projected End Dates
August, 2017 - December, 2019

### Species

<table>
