

Socialization of Data Collection SOP for Stock Assessment

The Socialization of Standard Operating Procedures (SOP) for Crab Data Collection was conducted on October 29, 2024, at the Aruna Hub in Tanjung Jumlai. The socialization aimed to guide data collection processes specifically for the enumerators from Tanjung Jumlai (Mr. Sahibe) and Jenebora (Asrul). This SOP was introduced by a researcher from the National Research and Innovation Agency (BRIN) and covered key areas:

1. Recording catch composition,
2. Gathering biometric information,
3. Detailing operational characteristics and specifications.

During the session, printed data collection forms for crab recording were distributed to the enumerators. The primary tools to be used in this data collection include rulers/calipers, data recording forms, and scales. Following the SOP briefing, the enumerators practiced filling out the forms and conducting measurements using samples of landed crabs. This hands-on practice aimed to ensure accurate data recording and familiarity with the measurement procedures to enhance data consistency across collection activities.
