

Brief updates on building a fishery and habitat profile in Saleh Bay, Indonesia

1. Study on mangrove and seagrass ecosystems in Saleh Bay was conducted in June-August 2023

2. Frame survey workshop

Data on fishing vessels in West Nusa Tenggara (WNT) was collected through two frame survey workshops, held on 10-11 January and 19 June 2023, in Mataram, WNT Province. The workshops were organized in collaboration with various organizations and attended by government institutions, universities, citizen science practitioners, and NGOs. The findings revealed that only 15% of fishing vessels were identified from the estimates, indicating a need for improvement in the fishing vessel data collection system. This initiative is the first of its kind in Indonesia and holds significant lessons for its implementation at the Fisheries Management Area or national level. An abstract based on this activity has been submitted to the 4th International Conference on Integrated Coastal Management and Marine Biotechnology (ICMMBT) and presented on 12-13 Sep 2023 in Bali.
