

**Mexican Gulf of California Brown Shrimp - trawl
Fishery Improvement Project (FIP)**

**Six-Month Progress Report
August – 2024**

**Action 2. Implement and
ensure the continuity of the
fishery monitoring program.**

Action Goal: There is adequate implementation of the onboard monitoring program to assess the impact of the fishery on secondary species and ETP species.

Progress Description:

An operations manual was initially created for the onboard monitoring program for the brown shrimp fishery in the Gulf of California. This manual details all activities, requirements, objectives, and protocols for information collection. The onboard observer program started in the 2023-2024 season, monitoring two fishing trips and 52 fishing sets. Additionally, the compilation and recording of information from fishing trips (logbooks) have already begun. This information will serve as the fishery's dependent data.
