

Pacific Ocean tuna – longline (Sky Vision) FIP Position Statement for the 2022 100th IATTC Annual Meeting

Drafted with agreement from all Pacific Ocean tuna - longline (Sky Vision) FIP Participants –
July 2022

The submission of this position statement is regarding the Fishery Improvement Project (FIP) currently being undertaken by the Sky Vision Longline Tuna Fishery. The fishery targets north and south Pacific albacore (*Thunnus alalunga*), western and central Pacific Ocean (WCPO) and eastern Pacific Ocean (EPO) bigeye (*T. obesus*), and WCPO yellowfin and EPO (*T. albacares*) tuna. The longline vessels are flagged to China, Fiji, Tuvalu Cook Islands and Vanuatu and fish on the WCPO and EPO high seas and within the Vanuatu, Fiji, Tuvalu and Cook Islands Exclusive Economic Zones (EEZs). Further details can be found here:
<https://fisheryprogress.org/fip-profile/pacific-ocean-tuna-longline-sky-vision>.

This FIP aims to meet the rising global demand for tuna in a sustainable manner by assuring catches do not exceed sustainable levels, promoting the ecosystem-based approach to fisheries management and strengthening policy and governance systems in the region. The end goal is to achieve certification under the [Marine Stewardship Council](#) Fisheries Standard by 2026.

As part of this FIP reaching MSC certification there are various actions that need to be undertaken that involve a range of different stakeholders. To ensure the FIP meets these objectives we need the support of the IATTC and urge action at the IATTC annual meeting this year on multiple topics laid out in this position statement.

The Pacific Ocean tuna - longline (Sky Vision) FIP strongly urges the IATTC and its member states to ensure the IATTC acts in August at the Annual Meeting of the IATTC Commission to:

1. Fully implement Resolution C-21-04 so that the status quo fishing mortality for bigeye and yellowfin is not exceeded; and adequately resource and implement the bigeye Individual Vessel Limits Pilot Study during 2022.
2. Prohibit the use of any netting in the construction of FADs and encourage fishers/shipowners to deploy a percentage of FADs mostly made of biodegradable materials from 2023 onwards.
3. Accelerate the management strategy evaluation process for all target tunas.
4. Adopt best practice reforms to Resolution C-12-07 to improve the regulation of at-sea transshipment.
5. Establish a work plan to strengthen the Review Committee's procedures and outcomes.

If the above-mentioned are addressed effectively it will have positive long term-sustainability implications and improve the overall health of the Eastern Pacific marine ecosystem to allow for fisheries like our current FIP to achieve sustainability targets, particularly in line with MSC certification.

Signed on behalf of the Pacific Ocean tuna - longline (Sky Vision), July 2022
