# WCPFC harvest strategy workplan

WPEA harvest strategy workshop,  
Brisbane, 27-28 June 2022

# Harvest Strategy Components

Pacific  
Community  
Communauté  
du Pacifique

## Management Objectives

- What do you want from your fishery ?

## Performance Indicators

- Quantifiable metrics that tell you how well you are achieving your objectives.

## Management Procedures

- Pre-agreed rules to manage the fishery to achieve the objectives (includes the harvest control rule HCR)

## Management Strategy Evaluation

- Simulation testing of management procedures to select the "best performing"
- Allows to explore trade-offs

## Monitoring Strategy

- Is the selected management procedure performing as expected?
- How do we know if it's not working?

# WCPFC Harvest strategy approach

# South Pacific albacore

Comparison of depletion estimates from the 2018 and 2021 stock assessment model grids

## South Pacific albacore

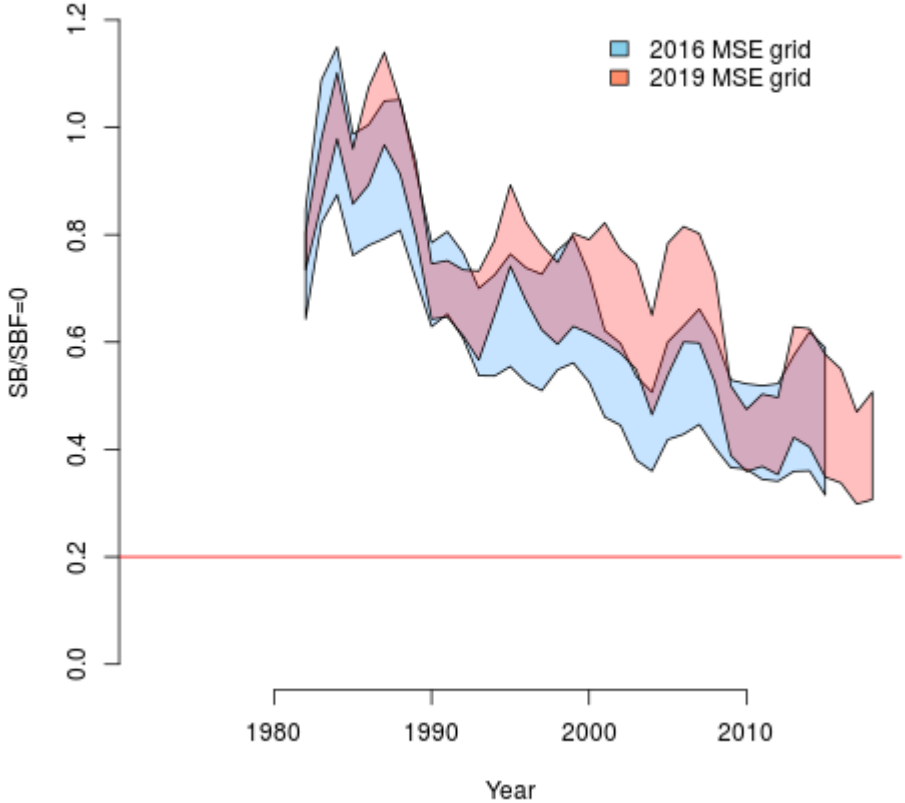

Initial focus on empirical MPs

Shift to model based MPs using simple biomass dynamic models (JABBA, SPICT)

Conflict between CPUE and length composition data

Difficult to get a reliable index of stock status

# WCPO skipjack

## WCPO skipjack

Focus on model-based MPs

Comparison of depletion estimates from the 2016 and 2019 MSE grids

# Performance Indicators

<https://ofp-sam.shinyapps.io/pimple/>

ofp-sam.shinyapps.io/pimple/

Performance Indicators and Management Procedures Explorer   Introduction   Compare performance   Explore indicators   Management procedures   Majuro and Kobe plots   About

**HCR selection**

- HCR 1
- HCR 1 (+/-15% limit)
- HCR 3
- HCR 4
- HCR 7
- HCR 9
- HCR 10
- HCR 10 (+/-10% limit)
- HCR 11

**PI selection**

- SB/SBF=0
- PI 1: Prob. above LRP
- PI 3: Catch (rel. to 2013-2015)
- PI 4: Relative CPUE
- PI 6: Catch stability
- PI 7: Effort stability
- PI 8: Proximity to SB/SBF=0 (2012)

**Catch grouping (PIs 3 & 6 only)**

All areas

Short-term is: 2022-2030, medium-term is: 2031-2039 and long-term is: 2040-2048.

Note that PIs 4 and 7 are for the purse seines in model areas 2, 3 and 5 only (excluding the associated purse seines in area 5.)

# Monitoring Strategy

Pacific  
Community  
Communauté  
du Pacifique

Tracks the actual performance of the selected management procedure, once it has been implemented, to see if it is performing as expected.

## Information sources for monitoring

- Stock assessment
- Catch, effort, ...
- Other data not included in the evaluation process (e.g. economic surveys)

## Questions to ask during monitoring

- Are the operating models still valid – or should they be updated ?
- Is the management procedure still the best – or can we improve it ?

## Performance indicators

To evaluate the actual performance of the MP and to compare the real performance of the fishery and stock to that expected from the MSE simulations;

## Stock assessment

To inform some of the performance indicators, particularly the biologically based ones;

## Review of the MSE simulations

To ensure that the data and assumptions that underpin the simulations used to select the MP remain appropriate;

## Exceptional circumstances

To identify situations that fall outside the range of assumptions over which the adopted MP has been tested.

# Summary of progress

## Management Objectives

- What do you want from your fishery ?

## Performance Indicators

- Quantifiable metrics that tell you how well you are achieving your objectives.

## Management Procedures

- Pre-agreed rules to manage the fishery to achieve the objectives (includes the harvest control rule HCR)

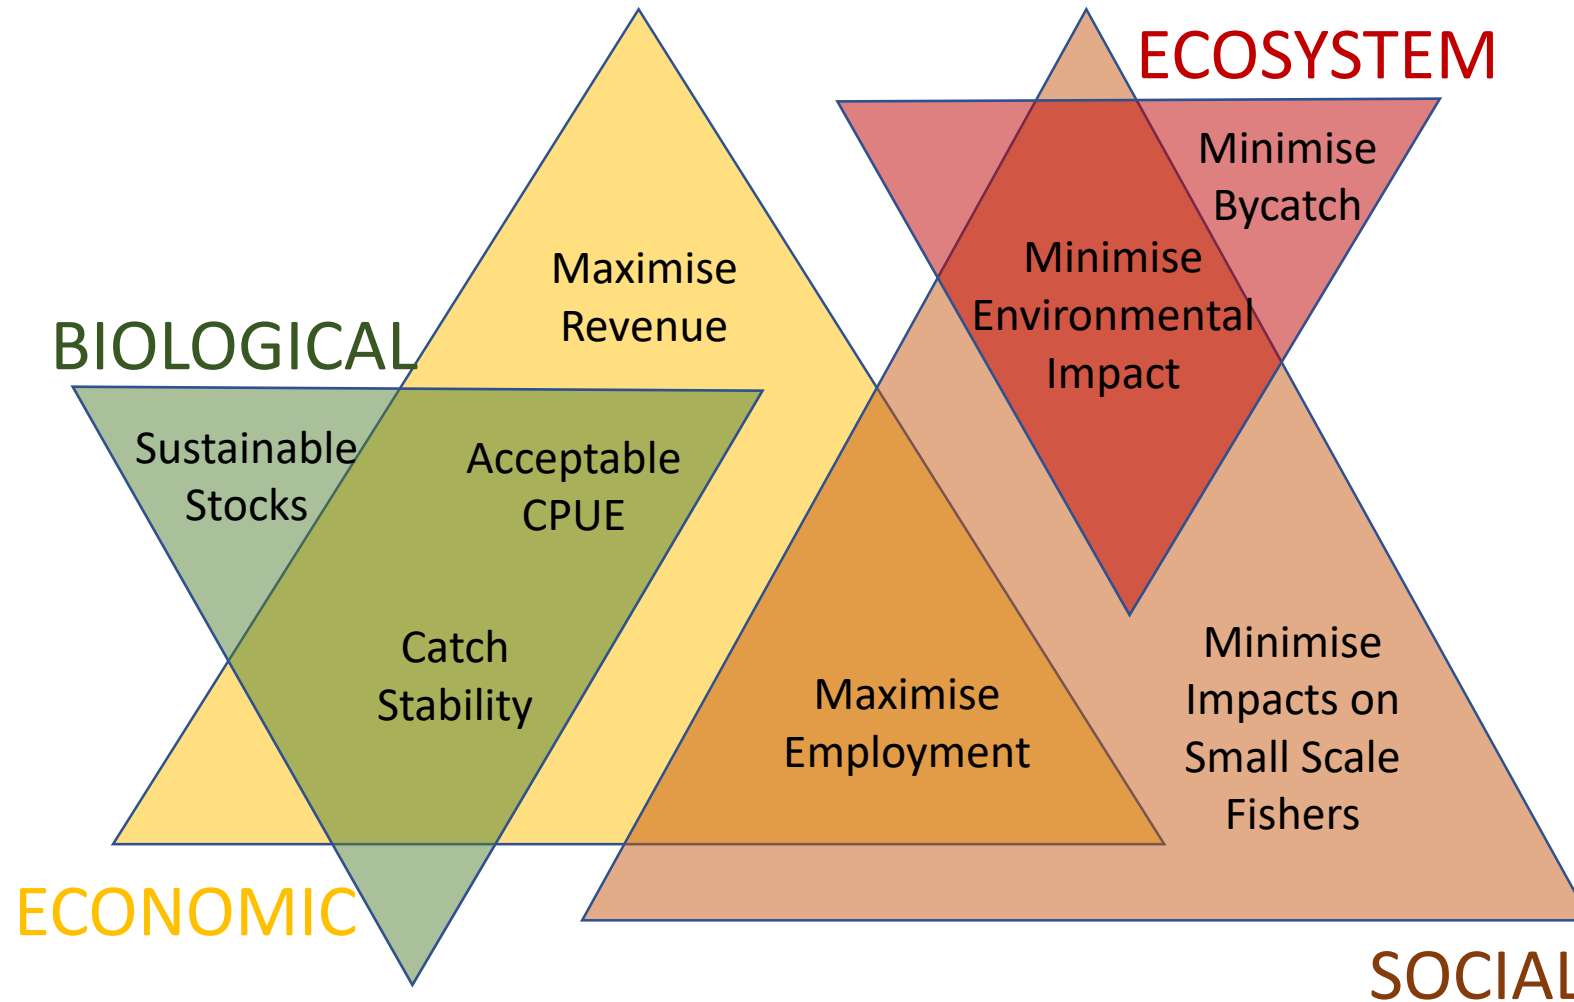

## Management Strategy Evaluation

- Simulation testing of management procedures to select the "best performing"
- Allows to explore trade-offs

## Monitoring Strategy

- Is the selected management procedure performing as expected?
- How do we know if it's not working?

# Management Objectives

Basis of the harvest strategy approach

Often expressed as high level aspirations.

Objectives will differ amongst members.

Can be revised if and when necessary

Some objectives may conflict.

# Management Objectives

Pacific  
Community  
Communauté  
du Pacifique

What do you want from your fishery ?

- High level, qualitative, long-term
- Basis of the harvest strategy approach
- Can be revised if and when necessary

MOW1 – “strawman” (WCPFC10-2013-15b)

- Initial discussions

Stocks vs Fisheries

- WCPFC harvest strategies to be developed at the fishery level.
- Initial focus is on single species approaches.
- More complex mixed fishery and multi-species approaches under development.

COMMISSION  
THIRTEENTH REGULAR SESSION  
Denarau Island, Fiji  
5 – 9 December, 2016

**DRAFT MANAGEMENT OBJECTIVES UNDER HARVEST STRATEGY APPROACH**

WCPFC13-2016-11b  
15 July 2016

Proposal by WCPFC Chair

The attached paper on Management Objectives was circulated to CCMs as WCPFC Circular 2016/34 on 15 July 2016.

# TROPICAL PURSE SEINE

If possible, when photo placed (covering whole slide, leave bar on left) please place in this box the SPC|75<sup>th</sup> logo in PNG format (duo color, white, blue) on top of the image. Don't forget copyright of the photo.

Type	Objective
<b>Biological</b>	Maintain SKJ & YFT & BET biomass at or above levels that provide fishery sustainability throughout their range
<b>Economic</b>	Maximise economic yield from the fishery
	Maintain acceptable CPUE
	Taking Article 30 of the WCPFC convention into account: Maximise SIDS revenues from resource rents
	Catch stability
	Stability, predictability and continuity of market supply
<b>Social</b>	Food security in developing states (import replacement)
	Avoid adverse impacts on subsistence and small scale fishers
<b>Ecosystem</b>	Minimise bycatch

# SOUTHERN LONGLINE

If possible, when photo placed (covering whole slide, leave bar on left) please place in this box the SPC|75<sup>th</sup> logo in PNG format (duo color, white, blue) on top of the image. Don't forget copyright of the

Type	Objective
<b>Biological</b>	Maintain ALB (and SWO, YFT and BET) biomass at or above levels that provide stock sustainability throughout their range
<b>Economic</b>	Maximise economic yield from the fishery
	Maintain acceptable CPUE
	Taking Article 30 of the WCPFC convention into account: Maximise SIDS revenues from resource rents
	Catch stability
	Stability and continuity of market supply
<b>Social</b>	Food security in developing states (import replacement)
	Avoid adverse impacts on small scale fishers
	Maintain / develop domestic fishery
	Human resource development
<b>Ecosystem</b>	Minimise bycatch
	Optimise capacity

# TROPICAL LONGLINE

If possible, when photo placed (covering whole slide, leave bar on left) please place in this box the SPC|75<sup>th</sup> logo in PNG format (duo color, white, blue) on top of the image. Don't forget copyright of the

Type	Objective
<b>Biological</b>	Maintain YFT and BET (and SWO) biomass at or above levels that provide fishery sustainability throughout their range
<b>Economic</b>	Maximise economic yield from the fishery
	Maintain acceptable CPUE
	Increase fisheries-based development within developing states economies
	Optimise fishing effort
	Maximise SIDS revenues from resource rents
	Catch stability
	Effort predictability
	Maintain BET, YFT (and SPA & SWO) stock sizes around the TRP
<b>Social</b>	Food security in developing states
	Employment opportunities
	Maintain / develop domestic fishery
	Human resource development
<b>Ecosystem</b>	Minimise catch of non-target species
	Minimise fishery impact on the ecosystem

# Performance Indicators

Pacific  
Community  
Communauté  
du Pacifique

Translate management objectives into something that can be measured.

- Need to closely resemble objectives.
- Proxies may be used (e.g. effort may be a proxy indicator for employment).

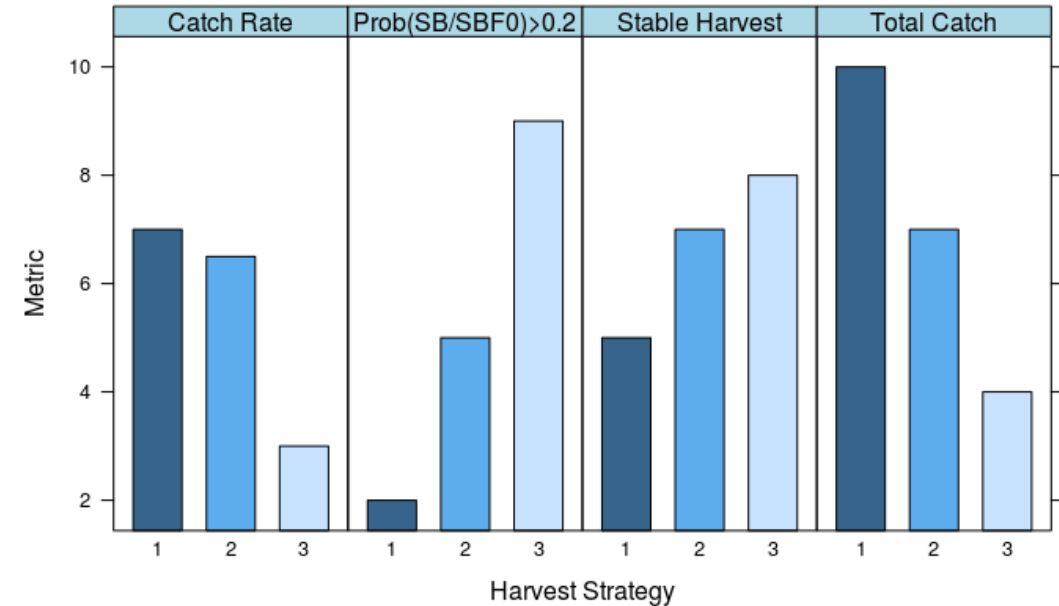

Identify which Management Procedure is most likely to achieve objectives.

- Trade-offs between competing objectives
- E.g. maximise catches vs. Minimise risk of falling below LRP

# Performance indicators

- Translate high level objectives into quantitative metrics
- Used when :
  - Developing, testing and selecting candidate HCRs
  - Monitoring the performance of an adopted HCR.
  - Ideally these two sets of PIs will be the same
  - Some PIs cannot be calculated from the simulation framework

## Performance Indicators Corresponding to Management Objectives

Skipjack	tropical purse seine fishery	(WCPFC13, Attachment M).
Bigeye & Yellowfin	tropical longline fishery	(WCPFC14, Attachment K).
South Pacific Albacore	southern longline fishery	(WCPFC14, Attachment K).

# Skipjack Performance Indicators

Maintain SKJ biomass at or above levels that provide fishery sustainability.	• Probability of SB/SBF=0 > LRP	1
✘ Maximise economic yield	• Effort relative to MEY	
Maximize economic yield	• Catch (relative to 2013-2015).	3
Maintain acceptable CPUE.	• CPUE relative to reference period levels (2012)	4
✘ Maximise SIDS revenue from resource rents	• Average value SIDS catch relative to non-SIDS catch	
Catch stability	• Variation in catch	6
• Stability and continuity of market supply	• Variation in relative effort	7
• Stability and continuity of market supply	• Average distance from TRP over time (assuming 2012 depletion levels)	8
• SB/SBF=0	• SB/SBF=0	

# Management Procedures

Basis of the HCR:

Allows for management by catch or effort for different fisheries

Reference year for catch and effort levels

# Management Procedures

## HCR meta-rules

- E.g. a 15% constraint on changes in catch or effort from one management period to the next

Fishing level – period 1

Fishing level – period 2

# Management procedure

Will the MP operate at the WCPFC-CA scale ?

Will the MP control all fisheries ?  
(Mixed fishery considerations)

Will the MP control catch or effort ?  
(or something else?)

Pacific  
Community  
Communauté  
du Pacifique

# Management procedures for skipjack

# Modelling Framework

## SC18 to agree the operating models for MSE

### Operating Models

- Grid of alternative model assumptions
  - Growth
  - Recruitment
  - etc.
- Grid should cover the range of uncertainty in the fishery and the stock
- Must also consider uncertainty in future conditions
  - Catch and effort reporting
  - Recruitment
  - Effort creep
  - etc.

# Modelling Framework

## SC18 to agree the operating models for MSE

### Operating Models

- Grid of alternative model assumptions
  - Growth
  - Recruitment
  - etc.
- Grid should cover the range of uncertainty in the fishery and the stock
- Must also consider uncertainty in future conditions
  - Catch and effort reporting
  - Recruitment
  - Effort creep
  - etc.

# Skipjack MSE uncertainty grid

Axis	Levels	Options		
	Reference	0	1	2
Recruitment variability	2	1982-2014	2005-2014	
Catch & effort	1	20%		
Size composition	1	Estimated ESS		
Tag recaptures	1	Status quo		
Steepness	3	0.8	0.65	0.95
Mixing period	2	1 qtr	2 qtr	
Growth	2		Low	High
Movement	1	Estimated		
Hyper-stability in CPUE	2	0	-0.5	
Effort creep	2	0%	2%	

Data collection

Model uncertainty

96 scenarios  
10 iterations each scenario  
960 evaluations for each HCR

# Management Procedures

For skipjack: the candidate management procedures differ only in the HCR

Basis of the management procedure:

- 3 year management period
- All fisheries subject to the management procedure (except archipelagic waters).
- Purse seine controlled by effort; other fisheries controlled by catch
- A scalar of 1.0 = 2012 levels

# Skipjack MSE – HCRs

First projection year            2019  
 First year MP run                2022  
 First time HCR applies        2023

Interim period (2019-2022)   average 2016-18

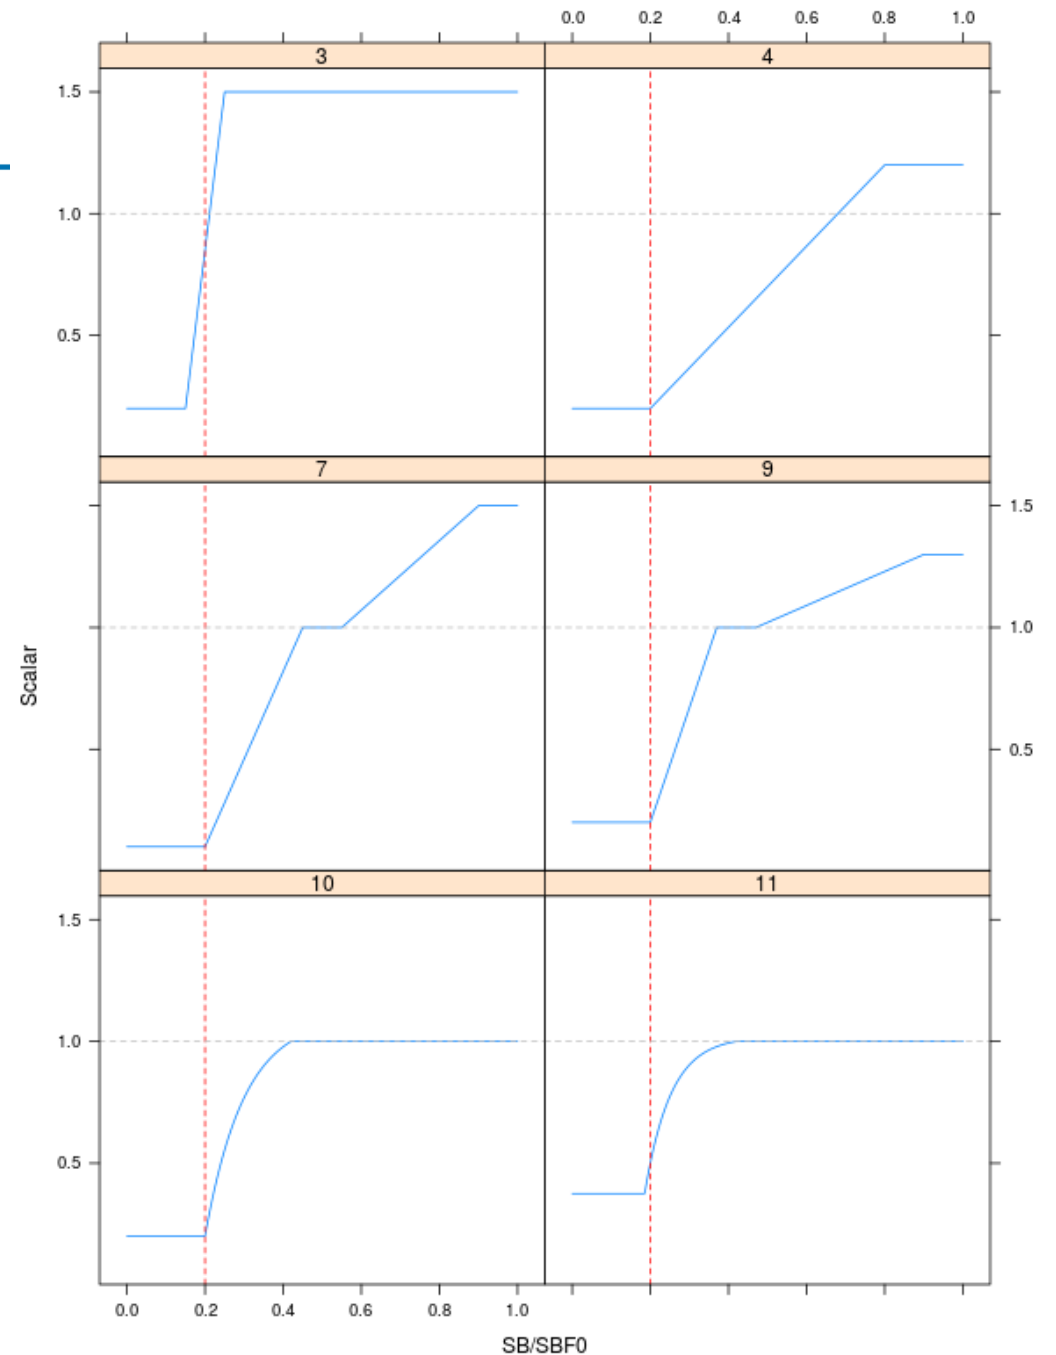

Projection period                30 years  
 Management period              3 years

TRP                                 SB/SB<sub>F=0</sub> (2012)

Reference catch/effort year    **2012**

HCR fisheries                    **All**  
     **effort**  
     **catch**  
     **non-purse seine**

Archipelagic waters            **fixed at 2012**

# Skipjack MSE – BASIS of the HCR

Seasonal pattern of tropical purse seine effort during the reference year : 2012

Conditions consistent with 3 month FAD closure

## **PNG & SB Archipelagic waters**

Adjusts the effort scaler to be applied to purse seine fisheries in region 6

Based on the ratio of purse seine fishing effort in 2012 inside vs outside archipelagic waters.

Both free school and associated effort combined SA-ALL-6

SU-ALL-6 (before standardisation)

Assumes that purse seine fishing effort inside archipelagic waters continues at 2012 levels.

## **ID & PH Archipelagic waters**

Adjusts the effort scaler to be applied to all fisheries in region 5

Based on catch because effort statistics for region 5 are less reliable.

- All catches from the ID domestic fishery (fishery 11)
- 50% of catches from the combined ID-PH purse seine fishery (fishery 12)
- 50% of catches from the pole and line fishery (fishery 13)

Hoshino et al (2020)

Assumes that purse seine fishing effort inside archipelagic waters continues at 2012 levels.

## Skipjack MSE – Performance Indicators

- |                          |   |
|--------------------------|---|
| Performance Indicator 1: | Maintain SKJ, YFT, BET biomass at or above levels that provide fishery sustainability throughout their range. |
| Performance Indicator 3: | Maximise economic yield from the fishery (average expected catch).  |
| Performance Indicator 4: | Maintain acceptable CPUE.   |
| Performance Indicator 6: | Catch stability.  |
| Performance Indicator 7: | Stability and continuity of market supply (effort variation relative to a reference period).                  |
| Performance Indicator 8: | Stability and continuity of market supply (probability of and deviation from $SB/SB_{F=0}$ in 2012).          |

Performance Indicators 5, 9, 10 & 11 continue to be developed
