### **Activity :**

Blue Swimming Crab harvest is the result of cultivation in ponds. This activity is a collaboration between APRI and BBPBAP Jepara

### **Details of activities :**

1. Drainage of pond water
2. Partial harvest by lifting the traps and nets that have previously been installed
3. Measurement of carapace width, calculation of the number of crabs, and weighing partial yields as Raw Material (RM) values
4. Boiling partial yields
5. Weighing partial yields as Raw Cook (RC) values
6. Distribution of partial harvests to APRI members who make purchases
7. Harvest in total by taking the crab manually and putting it in the basket
8. Weighing the total yield as a Raw Material (RM) value
9. Boiling the total harvest
10. Weighing the total yield as a Raw Cook (RC) value
11. Distribution of total harvest to APRI members who make purchases

### **Time and place :**

Wednesday, September 19 2018 at 07.00 until 22.00 WIB at BBPBAP Jepara

### **Present APRI Members :**

1. PT Kelola Mina Laut
2. PT Bumi Menara Internusa
3. Handy International
4. PT Graha Makmur Cipta Pratama
5. PT Muria Bahari Indonesia

### **Harvest Results Data :**

Age of crab when harvested : 3 months 15 days  
Total Raw Material (RM) : 125.94 kg  
Total Raw Cook (RC) : 98.11 kg  
Number of Harvested Crabs : +/- 1680 tails

### **Crab Purchasing Data (RC) by APRI Members**

1. PT Bumi Menara Internusa: 26.40 kg
2. Handy International: 54.88 kg
3. PT Graha Makmur Cipta Pratama: 9.65 kg
4. PT Muria Bahari Indonesia: 7.07 kg
