

Onboard Engagement and Implementation Activities on TTLA Vessels (January and April 2026)

During January and April 2026, TTLA vessels YU LONG FA No.168 and AN WEN FA No.188 actively supported Ocean Outcomes (O2) in conducting onboard engagement activities.

These activities included crew awareness training, implementation of ISSF skipper training components, and practical demonstrations on the handling and release of ETP species. The onboard visits also provided an opportunity to observe operational practices and reinforce the proper use of ETP mitigation measures.

The cooperation of these vessels demonstrates active participation at the vessel level and supports the translation of FIP requirements into practical implementation onboard.
